What is Stem Cell

Our bodies deteriorate with age. Some will get sick due to pollutants and stress in our lives. We have an in-built immune system in our body that helps with repair and regeneration, and one of the components of the immune system is stem cells.

Stem cells are the most basic cells that can regenerate, change to different cells and repair damaged cells by replacing them. Latest research has shown that stem cells can not only cure degenerative diseases, it can slow down the ageing process and regain youthfulness.

We use Human Mesenchymal Stem Cells (MSC) in our treatment which is extracted from the Wharton's Jelly (Umbilical Cord), because it is the youngest cells in the body and therefore most unpolluted with age. Our stem cells are of the highest quality source, with extensive donor genetic screening of up to 3 generations done by government awarded cGMP certified laboratory.

我们的身体随着年龄而恶化。有些人会因为我们生活中的污染物和压力而生病。我们的身体内置免疫系统，有助于修复和再生，免疫系统的组成部分是干细胞。

干细胞是最基本的细胞，可以通过替换它们来再生，转变为不同的细胞并修复受损的细胞。最新研究表明，干细胞不仅可以治疗退行性疾病，还可以延缓衰老过程，恢复青春活力。

我们在治疗中使用人间充质干细胞（MSC），这是从沃顿的果冻（脐带）中提取的，因为它是体内最年轻的细胞，因此最不受年龄影响。我们的干细胞是最高质量的来源，我们的干细胞来自马来西亚卫生部认证的cGMP实验室，ISO 14 664 Class 5 (Class 100) 洁净室。筛选供体细胞并对遗传和任何缺陷进行多达3代的审核。

World-class Medical Facilities 世界一流的医疗设施

All procedures will be done in one of the best hospitals in South East Asia, Gleneagles Hospital Kuala Lumpur. 所有手术都将在东南亚最好的医院吉隆坡格伦伊格尔斯医院完成。

Additional Services

Platelet-Rich Plasma (PRP)

PRP is a treatment where we concentrate your own platelets from your body and apply it to the areas that require most rejuvenation like your face or joints. These platelets will then send a signal for stem cells and other agents in your blood to target and heal the areas and regenerate new cells. Highly effective when used with stem cell therapy.

PRP 是一种浓缩您身上血小板的治疗方法，并将其应用于需要恢复活力的部位，如脸部或关节。然后，这些血小板将为您血液中的干细胞和其他药剂发送信号，并针对性地治愈这些区域使新细胞再生。与干细胞疗法一起使用时非常有效。
